## Math 241: HW 7

Due on Monday, September 23
Fall '13

## John "Curlee" Robertson

## Problem 1

Prove that $(\cos (x))^{\prime}=-\sin (x)$.

## Problem 2

Verify the following using product, quotient or chain rule.

$$
\begin{gathered}
(\cot (x))^{\prime}=-\csc ^{2}(x) \\
(\sec (x))^{\prime}=\sec (x) \tan (x) \\
(\csc (x))^{\prime}=-\cot (x) \csc (x)
\end{gathered}
$$

## Problem 3

Verify the quotient rule rewriting

$$
\left(\frac{f(x)}{g(x)}\right)^{\prime}=\left(f(x)(g(x))^{-1}\right)^{\prime}
$$

and using the chain rule.

## Problem 4

Compute the following:

$$
\begin{gathered}
\left((\sin (x)+x)^{100}\right)^{\prime}= \\
\left(x^{2}\left(\sin (x)+x^{2}\right)^{100}\right)^{\prime}= \\
(\sec (\sin (x)))^{\prime}=\text { hint: use problem } 2 \\
\left(\frac{x^{2}\left(\sin (x)+x^{2}\right)^{100}}{\tan (\sec (\sin (x)))}\right)^{\prime}=
\end{gathered}
$$
