## Problem 1

Draw the figure in 3 -space described by the equations

$$
x^{2}+y^{2}=1, \quad z=3
$$

## Problem 2

Draw the figure in 3 -space described by the equation

$$
x=y \quad \text { no restriction on } z
$$

## Problem 3

Draw the figure in 3 -space described by the inequalities

$$
0 \leq x \leq 1, \quad 0 \leq y \leq 1, \quad 0 \leq z \leq 1
$$

## Problem 4

Give the equations of a circle of radius 2 centered about the origin, that lies in the yz-plane.

## Problem 5

Plot the points $(-1,1,5)$ and $(2,5,3)$, draw the line segment which connects them and compute its distance.
